To: IFROS Admissions Committee
Subject: Recommendation Letter for Mostafa Ahmed Mostafa

Dear Members of the IFROS Admissions Committee,

It is with great enthusiasm that I recommend **Mostafa Ahmed Mostafa** for admission to the **International Master in Intelligent Field Robotic Systems (IFROS)**. I had the pleasure of supervising Mostafa during his internship at **Nestlé Egypt**, where he worked with us on advanced industrial automation and digital transformation initiatives in a high-performance manufacturing environment.

During his time with us, Mostafa stood out for his **strong technical aptitude, creative problem-solving**, and **dedication to integrating intelligent control systems**. One of his key contributions was to our **Digitalization and Predictive Maintenance Project**, where he successfully monitored machine states and power consumption data using industrial platforms. His work directly improved factory uptime and allowed for **early detection of anomalies**, showing a clear understanding of how data-driven intelligence can enhance real-world operations—a skillset highly relevant to field robotics.

Mostafa also took initiative in **electrical system optimization**, identifying outdated electrical components from factory drawings and helping us **replace over 40 critical parts**, boosting efficiency and system responsiveness. He designed an improved **inventory and tracking strategy** that reduced procurement delays by 30%, reflecting his **ability to merge hardware insight with smart system design**.

What impressed me most was his ability to understand **automation not just as control**, but as a holistic system involving sensors, actuators, embedded platforms, and data intelligence. He demonstrated **great maturity and independence** in troubleshooting automated systems, proposing improvements, and ensuring robust functionality under real industrial constraints—paralleling the challenges faced in outdoor or semi-structured environments targeted by the IFROS program.

In addition to his technical skills, Mostafa is a **proactive communicator and collaborative team player**. He easily adapted to our fast-paced environment, worked well across departments, and continuously sought feedback to improve. His drive to deepen his knowledge of robotics, intelligent systems, and control engineering makes him a perfect fit for a rigorous international program like IFROS.

Given his **strong foundation in mechatronics, hands-on experience with industrial systems**, and **clear passion for applied robotics**, I am confident that Mostafa will thrive in the IFROS master's program and make meaningful contributions to the academic and research community.

Please feel free to contact me for any further information.

Best regards,
Mayar El-Shall
Senior Electrical and Automation Engineer, Nestlé Egypt
